c.	Banji Mark	An unintentional, repetitive visual pattern of continuous bars and stripes usually parallel to the filling of woven fabric. Banji can be caused by physical, optical, or dye differences in the yarns, geometric differences in the fabric structure, or by any combination of these differences.
d.	Blotch,	An off colored area of any shape caused by grease or Oil. (Syn. oil spot). Cause due to leakage/slippage from machine.
e.	Bow	A fabric condition resulting when filling yarns are displaced from a line perpendicular to the selvages and form one or more arcs across the width of fabric.
f.	Broken filament	In multifilament yarn, breaks in one or more filaments.
g.	Clip mark	An open place causing a streak of variable length approximately parallel of the length of width.
h.	Decanting Mark	A crease marks or impression extending across the cloth near the beginning or end of a piece. Due to the thickness of the fabric leader seam.
i.	Double Pick	In woven fabrics, two picks wrongly place in the same shade.
j.	Draw Back	A weave distortion characterized by tight and slack places in the same warp yarn.
k.	End out	A void caused by a missing warp yarn.
m.	Float	In woven fabrics; the portion of a warp or filling yarn that extend unbound over two or more warp or filling yarns.

u.	<b>Loop Salvage</b>	An improperly woven salvage of uneven width or a salvage containing irregular filling loops extending beyond the outside edges.
v.	<b>Messiness</b>	Surface distortion in a fabric characterized by objectionable unevenness due to many minor deformations.
w.	<b>Pin Hole</b>	In fabric, a very small hole, approximately the size of the across section of the pin.
x.	<b>Pin Mark</b>	A series of holes near the edge parallel with the lengthwise direction of a fabric caused by the holding device on the pin tender frame.
y.	<b>Read Mark</b>	In woven fabric, a creek between groups of warp ends, either continues or at intervals.
z.	<b>Scalloped Salvage</b>	An abrupt, narrow indentation in the salvage.
aa.	<b>Salvage Mark</b>	In finished cloth, a lengthwise crease mark along the salvage caused by an edge being folded or doubled.

**INSPECTION CRITERIA TEXTILES**

1. The contracts will almost invariably stipulates a specification against which the store is to be inspected. Textiles and allied products not normally be accepted against DPL-15.
2. The following tests must be carried out before accepting a store:
  - a. Visual examination.
  - b. Full inspection
  - c. Physical tests.
  - d. Dye fastness tests
  - e. Other tests as specified
  - f. Bulk inspection (either 100% or part percentage of the supplies)
3. As textiles cannot be made flawless, tolerances are given for which allowances are claimed. These are listed below:
  - a. **Marking Allowance:** The manufacturer usually marks his cloth on both ends. This marked length will not be accounted for. Nevertheless the specification will stipulate the marking allowance the length of the piece (bolt) is immaterial.
  - b. **Short Piece Allowance:** Standard lengths of piece goods i.e. bolts of cloth are given below.
    - (1) Cotton- 40, 60, 80 yards  $\pm 5\%$ .
  - c. In case the offered bolts of cloth are below standard length, a short piece allowance will be claimed as under.
    - (1) For Cotton:
      - (a) For 30 to 39 yards, 1% allowance
      - (b) For 20 to 29 yards 2% allowance
    - (2) Lengths less than 12 yards will not be accepted
  - d. The above allowances are applicable to only 5% of the total quantity on order. i.e. 95% of the offered supplies must be of standard length or above. In exceptional short piece allowance claimed will be doubled.
  - e. **Flag Allowance:** Manufacturing defects i.e. weaving and spinning flaws, handling flaws etc are almost invariably present. These flaws are marked with red thread during the course of bulk inspection. The red thread makers are called "flags".

A limited number of these "flags" are tolerated but allowance is claimed against each one major defect entails one flag.

f. Single, minor defects, which affect appearance only but are barely discernable, are:

- (1) Broken ends and pick: loose, stark, light, missing ends and pick; coarse ends and pick; knots, slubs, snorts, floats, light stains due to direct, oil/grease, rust, etc. temple marks, shade bars.

(2) TWO MINOR DEFECTS = ONE MAJOR DEFECT

g. Major defects which affect appearance and serviceability/durability are;

- (1) A multiple (i.e. 2 or more) combination of minor defects as listed or those that are prominent and readily apparent. To this list is added: Thick/ thin place, smash marks, damaged selvedge, cracks, and weak spots.

h. A maximum of eight flags per piece of 40 yards will be permitted for 70% of the material offered, a maximum of 12 flags per piece 40 yards for the remaining 30% of the offered quantity. The number of flags permissible will be in direct proportion to the length of each piece e.g. for an 80 yard bolt 16 flags will be permissible.

j. An allowance of 4 ½ inches per flag will be claimed for the first eight flags, and 9 inches per flag for the next flags up to a maximum of 12 flags- dependent upto the actual length of the piece.

k. On completion of bulk inspection the stores is to be packed and marked in accordance with specifications and relevant rules.

l. Complete details of the inspection results are to be recorded on examiners slip/ inspection report. This will include a list of bolts inspected their serial numbers, defects noted and allowance claimed.

m. B/R samples are invariably to be retained fully documented and securely sealed.

### ACCEPTABLE QUALITY LEVELS (AQL)

1. Acceptable Quality Level (AQL) is maximum average defective items in a lot or limit / percentage of defective items in product offered store. It is expressed in a percentage. Number of average defective items is determined by following formula:

$$\text{Average defective items} = \frac{\text{No. of defective items found during inspection}}{\text{Total no. of items to be inspected}} \times 100$$

2. AQL process: It is used for inspection of finished product / garment by the QC professionals. AQL standard is depend on the quality of the product to be inspected, random sampling, and experience of inspector. Normally lower figure AQL standard e.g. 0.1% is used for high quality products/narrow width fabric and high figure AQL standard e.g. 10% for low quality products/ garment. AQL standard 2.5% means that allowable limit of defective item is 2.5 % of total items inspected. Usually AQL 2.5% is used for major defects, AQL 4.0% is used for minor defects and AQL 0.8% is used for slight defects; however zero acceptance for critical defects. Allowable limit of Major defects are less than minor defects and it depends upon nature of item offered store. It can be less than 0.1% or greater than 10%. Following AQL table is used to determine lot size/ offered store quantity, least No. of sample to be inspected, AQL %, and acceptance & rejection points.

<u>SIMPLY SAMPLING PLAN FOR NORMAL INSPECTION OR AS PER ORDER OF INSPECTING OFFICER</u>											
Lot size	Least No. of sample to be inspected	Allowable Quality levels(AQL) %									
		• Acceptable/ Allowable defective sample (Ac)		• Rejected /Exceed allowable limit of defective item (Re)		0.8%		2.5%		4.0%

3. If the inspector have time constraint then AQL is beneficial/ helpful in inspection of whole lot/ offered store. It save time, cost and give effective/ statistical result of product offered store e.g. If inspector needs 5 minutes to check the item , the quantity to be inspected is 2,500 items then it took 200 hours to check the whole consignment offered store it means 20 days approx. for one store. Calculation is as follows:

$$\frac{5 \text{ min} \times 1 \text{ hr}}{1 \text{ item} \times 60 \text{ min}} = 2,500 \text{ items} = 200.00 \text{ hrs} = 20 \text{ days}$$

After implementing AQL standard so the sample taken from the lot/ offered store is 200 items/ sample.

$$\frac{5 \text{ min} \times 1 \text{ hr}}{1 \text{ item} \times 60 \text{ min}} = 2,00 \text{ items} = 16.67 \text{ hrs} = 02 \text{ days}$$

4. Quality parameters/ AQL limits may be defined by Inspecting Authority of deemed appropriate) and communicate to the manufacturer, so the manufacturer set their quality levels (AQL limits) accordingly for their internal audit. Therefore, good quality product is ready for inspection.
